Structured gas purchasing means finding the optimum combination of purchase contracts, trading activities and transport and storage portfolios every day. ECG Erdgas-Consult has developed the MTS TRADE solution portfolio to help do just that, allowing dealers facing European competition to implement trading processes at all times, in a secure and flexible way.

MTS TRADE enables traders, active throughout Europe, to react flexibly to changing market requirements. The system is based on the most advanced technology available and features a variety of unique modular options. It allows ECG clients to:

- Use transport capacities cost-effectively;
- Realize arbitrage deals;
- Align their purchasing structures in an optimum way.

The MTS TRADE reporting platform is integrated with BIRT and offers a BIRT plug-in for visualization. This helps ECG clients present process information and support decision-making processes.
