

Electric Cloud

www.electric-cloud.com

Electric Cloud is the leading provider of Software Production Management (SPM) solutions, which automate, accelerate and analyze software build, test and deploy processes to optimize both physical and virtual IT environments. The company's products help development organizations speed time to market, boost developer productivity and improve software quality.

Electric Cloud's ElectricCommander solution automates and accelerates the software build-test-deploy process that follows the creation of new code. The ElectricCommander Customer Reporting Toolkit features:

- A tool to simplify data extraction from the ElectricCommander server so the data can be easily consumed by report-writing tools;
- A set of example reports that can be dissected or re-purposed to simplify the report-writing process, using the BIRT Report designer;
- A set of documents that can be used as a reference while building, automating and sharing reports. Also, the core of this documentation is available as an ElectricCommander Custom Reports Technical Note.
