

IBM (IBM Rational Application Developer)

www.ibm.com

Users can employ IBM® Rational® Application Developer for WebSphere® software to quickly design, develop, analyze, test, profile, and deploy high-quality Web, Service-Oriented Architecture (SOA), Java, J2EE, and portal applications.

Built on Eclipse 3.2 – an extensible platform for constructing and integrating software development tools – Rational Application Developer is part of the Rational Software Development Platform family of products. Each product in the Rational desktop family uses the same Integrated Development Environment (IDE). The differences among these products reflect the optional features that are available and installed in each configuration.

Learn how to build BIRT Reports within IBM Rational Application Developer at:
