

KonaKart

www.konakart.com

KonaKart is an affordable Java-based shopping cart software solution for online retailers; it is easily customizable to match specific customer requirements. The engine for the enterprise-level eCommerce solution implements a documented application programming interface, on top of which users can write integration modules and custom features in order to personalize their offering.

KonaKart has been designed to allow the integration of any reporting system, but BIRT has been included in the download package and is an excellent choice for adding additional reporting functionality.
