OTI Transformasi Lintas International is a management and technology consulting firm, headquartered in Indonesia with sister companies in Singapore and India. The company specializes in helping organizations transform themselves and their performance.

With the help of the BIRT Report Designer, OTI developed an application from scratch to provide financial and operational reports to its clients. The application pulls and integrates multidimensional and Geographic Information System (GIS) data from across multiple databases, and allows OTI's clients to customize their reports for business analysis.

The company especially likes BIRT because it is robust, easy to use, flexible and very appealing visually to their clients. BIRT also supports Flash gadgets and the response from their clients has been great, as they like the fact that they can easily modify and customize their reports.
