Projektron BCS (Business Coordination Software) – a product by Projektron GmbH – is a Web-based project management software solution with which users can plan, coordinate and evaluate their projects. The software is simple to use and can be individually configured.

The BIRT Report Designer can be used to conveniently adapt and expand Projektron BCS's standard reports to users' own requirements, also allowing them to generate their own reports. For data integration purposes the Projektron server can be connected to the designer as a data source using the plug-ins supplied with Projektron BCS. In addition, data from SQL databases, XML, Web services and CSV files, for example, can also be used in the reports. The report layout can be created using drag-and-drop functionalities. The individual elements are positioned using tables and grids, and common formatting options such as font size, direction, color, etc., are available. Newly created or modified reports can be integrated into Projektron BCS and easily generated from there via the user interface.
