

Software AG

www.softwareag.com

Software AG – founded in 1969 in Germany – is the global leader in Business Process Excellence. Software AG's 40 years of innovation include the invention of the first high-performance transactional database, Adabas; the first business process analysis platform, ARIS; and the first B2B server and SOA-based integration platform, webMethods.

Software AG's CentraSite provides organizations with a single place to store, find and re-use service and process assets. CentraSite is the Business Service Repository for SOA and BPM; it eliminates re-work, assures consistent quality and keeps an organization's services aligned with business needs.

CentraSite Reports can be used to register BIRT reports. These reports provide a way for clients to view, share and print information derived from the objects they have created. CentraSite Control allows a client to generate a report using the BIRT reporting engine and displays the generated report as a new task window in the BIRT Report Viewer.
