

Symantec Corporation

www.symantec.com

Symantec Corporation provides security, storage and systems-management solutions to customers that range from consumers and small businesses to large global organizations. The company helps those clients secure and manage their information-driven world against more risks at more points, more completely and efficiently than any other company.

Veritas Operations Manager is a product within Symantec's suite of business solutions. Companies use Veritas Operations Manager as a platform for Storage Foundation and Cluster Server environments. The product helps clients optimize their data-center assets, centralize visibility and control, ensure availability, scale operations, increase storage utilization, and maintain compliance.

Working with Veritas Operations Manager, BIRT provides reports and visibility on storage utilization and the availability trends of a client's data center. Feedback from clients has been positive based on the quality of information they have received. According to a Symantec senior software engineer, the BIRT Report Designer has been easy to use and the forums have been a great support for troubleshooting any questions users have while developing BIRT reports.
