

# ThyssenKrupp Presta

<http://www.thyssenkrupp-presta-camshafts.com>

With 1,400 employees working out of five locations worldwide, ThyssenKrupp Presta Camshafts is a successful producer of camshafts, valve train systems and bearing blocks. The company's camshafts are used by virtually all global automotive manufacturers and can be found in more than 50 million vehicles worldwide.

ThyssenKrupp Presta uses Eclipse BIRT in conjunction with the asset management tool IBM Maximo, to help manage service requests and work orders. BIRT allows the company's internal employees to create simple reports in a short time and create their own custom reports, in order to offer analysis regarding machinery and work orders in progress. The company chose BIRT for its simple functionality, as well as its large user community.
