TimeSolv Corporation's software solutions utilize the best of today's professional Internet technologies, including WatchGuard™ firewalls and load balancing, Dell™ rack mount servers, and Oracle™ databases. The company owns and supports all of their equipment and software, so their clients' data is never on a shared server with that of hundreds of other companies. TimeSolv hosts their applications in state-of-the-art data centers with multiple redundant connections to the Internet backbone.

TimeSolv's applications are used by small- to medium-sized law firms, management and marketing professional-service firms, engineering and IT consultants, and health service providers. Thousands of customers around the world have discovered the ease of use of TimeSolv's solutions and use them every day for time and expense tracking, billing, and project management.

The company's online SAS time and billing service uses BIRT for extensive reporting, as well as sophisticated and flexible invoice generation.

TimeSolv especially likes BIRT because it was integrated easily into their application, the API was great, output options were flexible, and it has provided great runtime performance and stability.
