

Zend

www.zend.com

Zend is the place to go for PHP expertise and sound technology solutions. Its Zend Platform solution incorporates advanced-reporting capabilities to provide enterprise users with expandable-reporting functionality. Actuate's BIRT reporting application, together with Zend Platform's Java Bridge, extracts reports from Java libraries and generates reports on any information. This solution is essentially a PHP API to the Actuate BIRT 2.0 runtime environment, which supports both PHP 4 and PHP 5.

Actuate's report run-time environment allows Zend Platform users to generate and run BIRT reports directly from Platform Administration. In addition, Zend Studio XE includes the BIRT report design interface. Both components complement each other in providing an overall solution for developing and creating Business Intelligence reports.
