

Auxis (for the U.S. Patent and Trademark Office)

www.auxis.com

A Florida-based consulting and outsourcing organization, Auxis has worked with over 250 companies over the past 14 years. One such client is the United States Patent and Trademark Office, the federal organization responsible for granting patents and registering trademarks within the U.S.

Auxis uses Eclipse BIRT within Trous Technologies' Trous 9 solution set, designed to help organizations streamline their Business Technology Management and Enterprise Architecture (EA) initiatives. At the Patent and Trademark Office, Auxis utilizes the tool to connect to a repository and create reports to model EA concepts, using BIRT tables and cross-tab objects to display relevant information. The internal EA analysts who use BIRT especially like that they can export the information to Excel automatically. In addition, the master pages – designed to work with all formats and inherit structure through libraries – are well used by the Auxis team, as are the preview mode and the “join data sets” function.

Information source from ‘Get Your BIRT Rocks T-Shirt program,’ Auxis and the U.S. Patent and Trademark Office (<http://www.auxis.com/> and <http://www.uspto.gov/about/index.jsp>) on 1/17/2012.
