

eBworx Berhad

www.ebworx.com

eBworx Berhad is a leading international consulting and technology solutions firm specializing in the financial services industry. The company delivers innovative and high-performance solutions to their clients, supporting them in their business objectives.

eBworx has an Automated Log Processor application that monitors the system performance and overall health of their clients' servers. The application collects and analyzes system logs from a target client's server, allowing eBworx's employees to use BIRT to generate reports on system response time, stored procedure execution time, webpage access time and peak page visit access count, as well as the performance of a client's CPU, memory, paging and disk application and database server. BIRT allows customization of the systems' performance through sorting and filtering.

BIRT has proven to be user friendly for eBworx, allowing for easy customization of report templates. Now that BIRT is being used as the reporting technology, eBworx can create professional-looking reports, with graphs and tables for presentation to business users over the web.
